## Here are some of the procedures that Dr. Girish suggest depending upon your condition (for Weight loss or reversal of Diabetes)

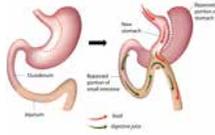

Vertical Sleeve Gastrectomy

### Laparoscopic Sleeve Gastrectomy

Sleeve surgery has become increasingly safe & effective procedure for obese people. The Laparoscopic technique for Sleeve surgery has made this procedure very popular. It has effect on weight loss by caloric restriction & also helps in better control of blood sugar levels & in some cases even reversal.

Mini-Gastric Bypass

### Mini Gastric By-Pass

The Mini Gastric Bypass (MGB) is a Short, Simple, Successful gastric bypass weight loss surgery which is gaining popularity in recent years. It is low risk & has excellent long term weight loss & minimal pain. The mini gastric by-pass procedure is restrictive and mal absorptive. Excellent procedure for reversal of Diabetes type 2.

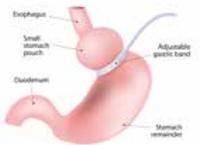

Mini-gastric Bypass (MGB)

### Gastric Bypass - R&Y

Gastric Bypass Surgery. This is the gold standard for the weight loss surgeries. Gastric bypass surgery makes the stomach smaller and allows food to bypass part of the small intestine.

GASTRIC BAND

### Gastric Band (Reversible Surgery)

A gastric band is placed on a portion of the stomach and reduces the amount of food that you are able to eat. It acts like a belt around the top portion of your stomach, creating a small pouch. This means that you feel full after eating only a small quantity of food. There are a number of different gastric bands available.

### Gastric Balloon (Weight loss without surgery)

The Intragastric Balloon is a nonsurgical procedure indicated for patients who are either overweight & has failed dieting attempts or cannot do dieting due to their current life style. Also severely or morbidly obese (donot want surgery or in preparation for surgery). Intragastric Balloon is an effective procedure for weight loss.

Gastric Balloon	Gastric Sleeve	Gastric Bypass
Insertion – AED 12,000 (3,260 USD)	AED 39,000 (10,600 USD)	AED 49,000 (13,300 USD)
Removal – AED 3,000 (800 USD)
